- Successful delivery on at least two long-term C++/C development programs.
- Experience with Gradle.
- Experience with Android/ OS X/ IOS

About the Company

ContinUse develops remote and unified biometric sensor/platform for eHealth, Internet of Things, mobile & consumer devices. It is based on remote, contactless, active and continuous biometrics scanning. The system actively and continuously measures biomedical parameters, providing authentication and bio-competence information of individuals. The sensor/platform is capable of measuring various bio parameters simultaneously for authentication, health and wellness monitoring.
